PROJECTS

Journal App
- Developed a secure journal management backend using Java, Spring Boot, and JWT for token-based authentication and session management.
- Implemented role-based access control to allow only Admins to manage users, while Users could access only their own journal entries.
- Wrote unit and integration tests using JUnit and Mockito to ensure feature reliability and correctness.
- Integrated Sonar Cloud for continuous code quality analysis and to enforce clean coding standards.
- Documented all RESTful APIs using Swagger (OpenAPI), and verified endpoint functionality with Postman.

Banking Application
- Built a scalable and secure banking backend in Java using Spring Boot with RESTful architecture for user registration, login, money transfers, and loan management.
- Secured endpoints using Spring Security and JWT, enabling role-based access for Admins and Customers.
- Designed a relational MySQL database with JPA/Hibernate for managing Users, Accounts, Transactions, and Loans.
- Wrote extensive tests and integrated CI pipeline using GitHub Actions and SonarCloud.
- Documented RESTful APIs with Swagger (OpenAPI) and validated functionality using Postman; ensured code quality with Sonar Cloud.
